

Telford Footbridge celebration

A special launch event celebrated the completion of a major piece of work supported by the MHA.

The Telford Footbridge project, funded by the Department for Transport, and constructed by MHA framework contractor Balfour Beatty Civil Engineering has transformed the area surrounding Telford Central Train Station, providing Telford with a gateway that is striking but also provides improved access for all.

Senior representatives of the client Telford and Wrekin Council, Network Rail, Balfour Beatty, the train providers, and the designers Jacob attended the event with the bridge formally opening to the public, to coincide with Telford's 50th Birthday.

MHA Manager Peter Barclay said: "The innovative and striking structure is an excellent example of collaborative working. I'm delighted that the MHA framework contributed to this successful project."
