MHA+ member name

Amey Consulting

Other partners involved in the development of this product/project/nomination

Nottingham City Council

Summary

Through the MHA+ framework Amey Consulting were commissioned by Nottingham City Council to deliver both the feasibility study and preliminary design of a new foot/cycle bridge over the River Trent. The bridge is the first crossing over the Trent in 60 years and is located to the southeast of the city centre linking the emerging waterside community to existing communities south of the river. Given the location of the bridge, with restricted space and existing infrastructure both sides of the river, and the requirement to satisfy the needs of multiple stakeholders an innovative 'network arch' design was proposed by Amey Consulting. The footbridge was opened on 2nd June 2026 to the public following 'design and build' by other parties.
